To: USDOJ

I think that anyone with any type of understanding knows that M\$'s proposal to donate 1B. in software/hardware to the education market is a total crock (they don't actually spend much on the software, the hardware will be windows only, therefore helping to push Apple out of one of the few markets that M\$ has any competition with).

If the US DOJ let's this go bye it's a total farse. Microsoft has constantly abused it's monopoly power & will only continue to do so if left unchecked. They keep on pushing into other markets & soon I fear that they'll just be to powerful for any government to stop (seriously). If the US DOJ is having problems with them now, imagine what it'll be like 10 years from now when they've taken over many more markets, have that much more control, \$\$\$ & invluence.

In my opinion, they must be stoped now.
